

*July*

## July focuses on perfect details and strives for new comfort.

The ergonomic design can properly protect the user's spine, neck, waist and shoulder, and fully fit the shape of the user to create great comfort. The versatile function options can create comfort in any dimension to make the user feel a new sense of dynamic and static relaxation.

## Setting exclusive comfort

Every component and overall design is aimed at the healthiest sitting posture.

### Adjustable seat height:

Adjustable seat height can fit user's height to make him/her more comfortable and leg muscles more relaxed.

### Armrest:

2D aluminium alloy polished armrest with DuPont nylon casing and eco-friendly PU pad is suitable for various skins.

### Synchronized tilting:

Appropriate titling angle is adjusted according to the user's shape and weight to create a new sense of relaxation.

## Setting exclusive comfort

Every component and overall design is aimed at the healthiest sitting posture.

### Integrated cushion with lumbar pillow:

July adopts the integrated design of cushion with lumbar pillow to always keep the fittest lumbar support, fundamentally eliminating the phenomenon of displacement/inadequate support.

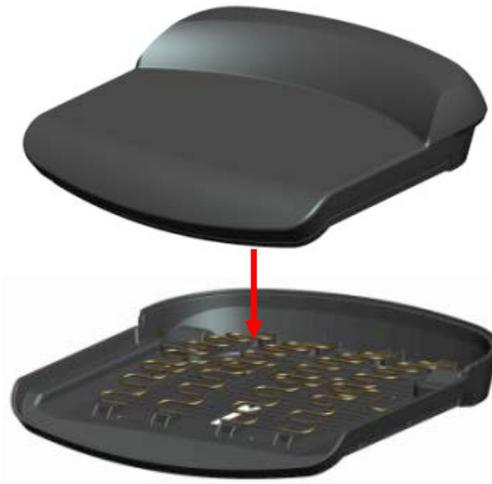

Lumbar pillow

### Compressive suspension cushion:

The cushion is embedded with high-resilience spring made of silico-manganese steel, matching the user's hip deformation to create full and balanced support in order to relieve fatigue.

Bow spring

### Patented ergonomic chassis:

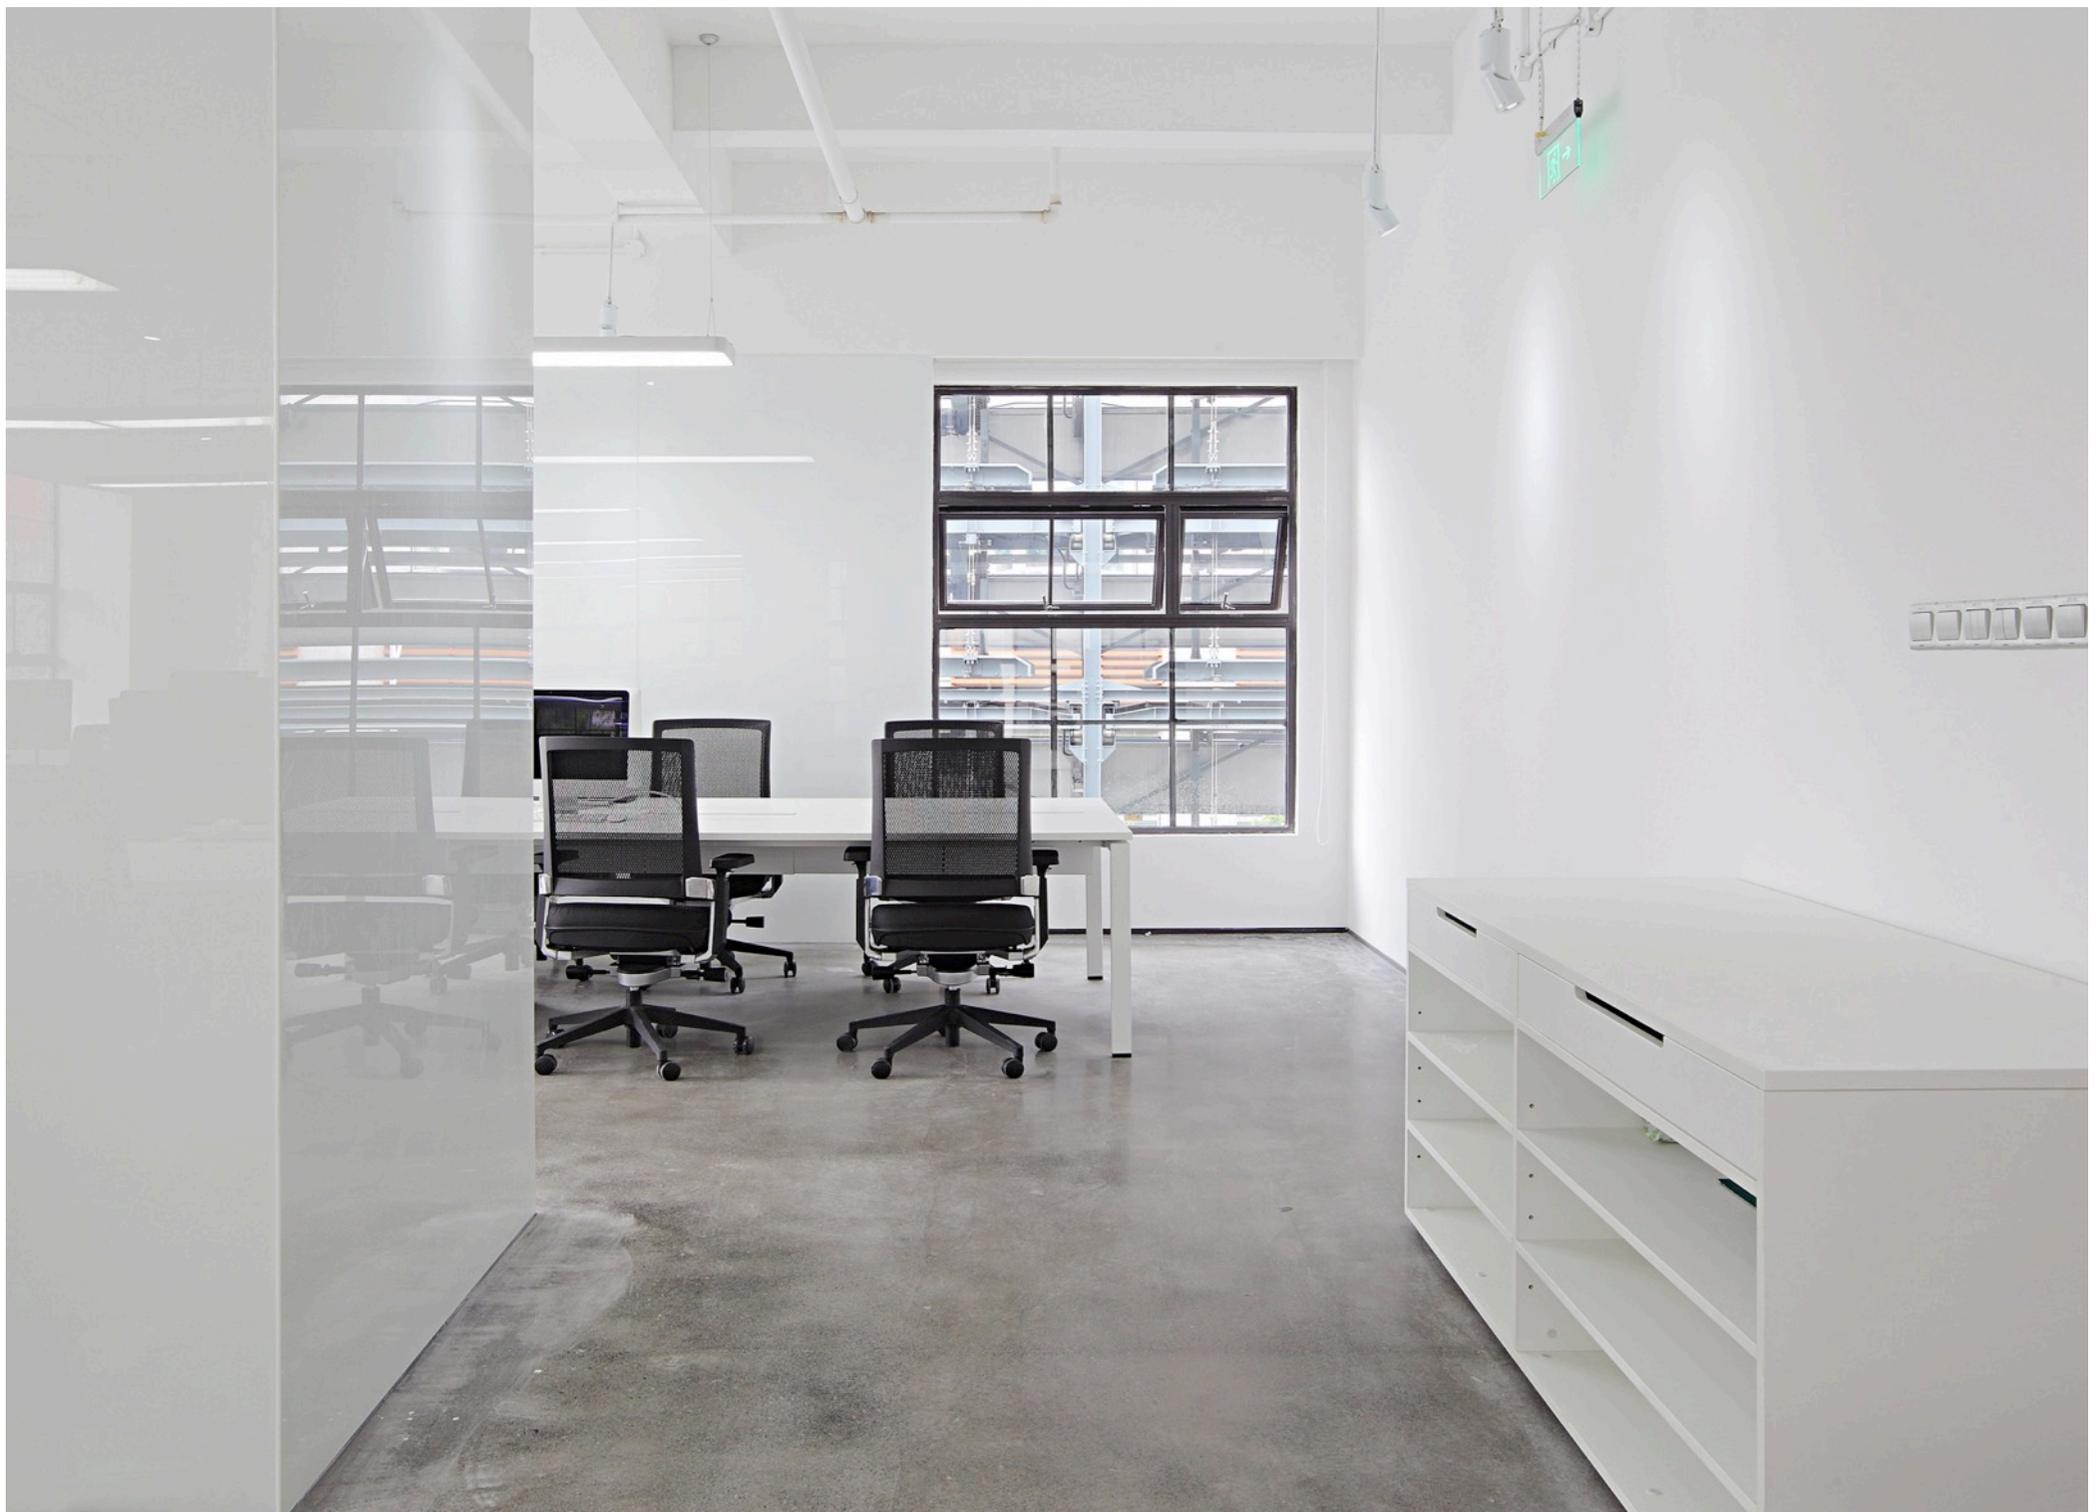

The new ergonomic chassis adopts a new mechanical structure, realizing the descent and forward movement of cushion in case of backward tilt of the back. In this way, the user's feet can naturally reach the floor without compressing the legs, improving the user's comfort. Besides, the center of body weight of the user is shifted forward in case of backward tilt in order to ensure the chair stability and proper stretch, effectively relieving fatigue.
