MOTU - WORK IN MOTION

MOTU, co-designed by MATSU' s partner Westermann, is a perfect collection for "fluent working" space, where employees are free to move, sitting or standing. Employees are users but decision makers as well, which means they are filled with sense of ownership during "fluent working" .

Fluency represents freedom, openness, existence of argument and mistakes. MOTU makes thoughts flow, which will lead to “outflow of information” and innovations.

Table A

MOTU - WORK IN MOTION

MOTU is a new generation of office furniture involving basic traditional elements (desktop/legs) and advanced technologies/materials and representing brand new designs. It is diversified and flexible and can make self-adaption to meet all kinds of needs. What matters to us most is employees can get more freedom in this space and lead a "fluent working" mode. Inspiration is everywhere when there is new posture and new vision.

Meeting table A plus

Meeting table A plus is a kind of lifting conference desk that enables users to sit and stand during a conference, because no one ever made a rule that a conference needs every participants to sit square; it' s a good idea that people gather and discuss at bar counter because that will be efficient and Meeting table A plus can also meet this kind of conference demands

Administration table

A plus

The supporting legs of Table A plus are even stronger than those of Table A, which gives an intense industrial style and steadiness. What's more, this structure ensures firmer support.

Sputnik II: mechanic height adjustment

Sputnik I can be regarded as a small temporary workstation. In the old days, we need much room for the storage of paper files and desktop computers but now, as paperless work mode develops and as laptops and other mobile devices get more predominant, these small workstations are just what people need. This is Sputnik I, composed of 4 legs and one lifting desktop mechanically or electrodynamically. Wheels make Sputnik I a real “mobile satellite” , which can be put anywhere around you to meet all your demands.

Veneer

(desktop)

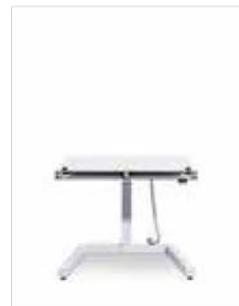

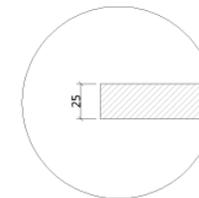

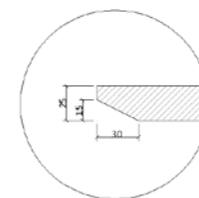

25mm-thick MFC right-angle corner
